

CHRISTIE

OUR PHILOSOPHY

Christie manufactures the original, iconic Australian commercial barbecue for cooking in shared public spaces.

Since 1965, more than 50,000 of our safe, reliable, energy-efficient grills have been installed for community use in parks and urban environments worldwide.

The user experience is at the center of everything that we do. Our electric and gas grills are engineered to guarantee the best cooking experience for barbecue users and reduce costs for our clients.

Public barbecues are proven to promote:

- community engagement,
- social cohesion, and
- healthy outdoor living

The experience of cooking and sharing food is common to all cultures. It brings people together and improves the outdoor recreation experience for those who visit, play, and relax in public spaces.

We are passionate about providing the ultimate public cooking resource – not just the best products, but also the best user experience and customer service. We support our customers throughout the product's design life, with guaranteed spare parts and dedicated customer support.

PUBLIC BARBECUE BENEFITS

A safe and hygienic alternative to open flame grills

Environmentally sustainable

Christie electric and gas grills were developed to provide a safe and hygienic alternative to open flame barbecues. They offer an environmentally sustainable solution for shared spaces that:

- Eliminates the environmental hazards of fires and smoke
- Reduces pollution and waste from disposable options
- Reduces the risk of personal injury from exposed flames and coals

Convenient and simple to use

Fixed barbecues eliminate the need to transport domestic barbecues or buy disposable grills and fuel. It allows barbecue areas to be suitably located for cooking by large numbers of people, and ensures that waste is disposed of responsibly.

We design and engineer our grills specifically for public use. They are easy to clean and maintain, and very simple to operate. A simple push-button starts the sterilisation and cooking cycle, and the grill switches off automatically after a pre-set time.

Easy to maintain

After fifty years of product refinement, our grills have been proven to withstand high use in harsh environments. Our products are durable, cost-effective, and simple to operate, clean, and service.

Restricting barbecue activities to a specific location has several benefits:

- cooking, cleaning, and maintenance is easy to monitor and manage
- optimise cleaning and maintenance regimes for barbecue locations
- drive savings while providing clean and functioning barbecue facilities for everyone to use

A community activity

Public outdoor spaces provide healthy options for residents and visitors to enjoy, particularly in high-density urban and busy tourism environments.

Public barbecues, in particular, encourage people to gather and participate in beneficial outdoor living. They bring people of all abilities, ages, socio-economic, and ethnic backgrounds together to create a sense of community.

OUR FOCUS

SUSTAINABILITY

Our energy-efficient grills are engineered to provide a safe, sustainable alternative to the pollution and safety risks associated with open flame grills.

Carbon footprint

Christie products have the lowest possible carbon footprint. They are manufactured and quality-controlled in Australia, where we use solar energy in our purpose-built factory. We adhere to environmentally sustainable processes such as LEAN manufacturing principles, and our products are manufactured using metal that is 100% recyclable.

Energy savings

We use the latest heat-sensing technology and real-time temperature adjustment to conserve energy based on the amount of food on the grill plate. Therefore, our grills use the minimum power necessary while providing a superior cooking experience.

Christie products have the lowest possible carbon footprint

OUR FOCUS

CUSTOMER EXPERIENCE

Quality impacts the life expectancy of any product. We consider the product life cycle as well as the customer experience in everything that we do. It is not only our market-leading products but also the user experience and customer journey that sets us apart.

For barbecue users

For barbecue users, we provide grills that are powerful enough to cook a variety of food quickly and evenly, are easy to clean, and safe and straightforward to operate.

For barbecue owners

For barbecue owners, we reduce operating costs and ensure that all our products are robust, reliable, and easy to service and maintain.

For project specifiers

We provide detailed information and the right advice, with guaranteed spare parts and fast turnaround times. We also provide dedicated customer service and technical support from real people. You are in safe hands with Christie.

OUR FOCUS

INNOVATION AND TECHNOLOGY

Through our commitment to constant innovation, we are responsible for every significant advance in the public barbecue industry.

The market leader

Our outdoor grills offer:

- proven unrivalled cooking performance and energy-efficiency
- safe and hygienic operation
- ease of use
- all-abilities access, and
- guaranteed quality

As leaders in the design and manufacture of commercial grills for public use, we work closely with parks, tourism, and urban design professionals. We invest heavily in ongoing research and development. We source the best materials, employ the best production techniques, and use the latest technology in our mission to produce the ultimate barbecue experience.

COOKTOPS

Our award-winning gas and electric barbecue cooktops are self-contained outdoor cooking appliances. They can be ordered with our pre-fabricated cabinets, or installed in any structure that meets local safety standards.

Energy efficient

Christie cooktops are designed to strike the optimum balance between energy-efficiency and the ability to cook large quantities of food quickly, evenly, and hygienically. Using the latest stainless-steel alloys ensure even heat dispersal across the entire grill plate.

Easy to service and maintain

The flat grill plate (also known as a plancha or teppanyaki) is robust, hygienic, and easy to clean. With all-stainless construction and weighing just 19kg, the drop-in design ensures that our cooktops are easy to install and service.

Safe and hygienic

A state-of-the-art digital controller monitors all barbecue operating functions in real-time. It ensures that safe and hygienic cooking temperatures are always reached. In the event of a malfunction, it will also generate error notifications that allow for quick diagnosis and prompt repairs.

Exceptional customer support

We provide expert advice and support from qualified staff, and guarantee that parts will be available for at least ten years from the date of purchase.

Our latest-generation CC2 electric cooktop won an Australian Good Design award. It represents the latest evolution in our ongoing development of the ultimate energy-efficient, long-lasting barbecue.

Our 3.5kW cooktop is powerful enough to meet the demands of continuous use, yet responsive enough to ensure the lowest possible power consumption.

Maintenance alerts

A digital controller monitors all barbecue functions to ensure that it always reaches safe and hygienic cooking temperatures. This smart self-diagnostic feature allows it to generate error notifications that allow for quick diagnosis and fast repairs.

Balanced performance

Research has shown that our barbecues are used mostly by large groups. Each new model Christie cooktop is exhaustively tested in real-world applications to ensure that it achieves the optimum balance between performance and power consumption.

Engineered for high use

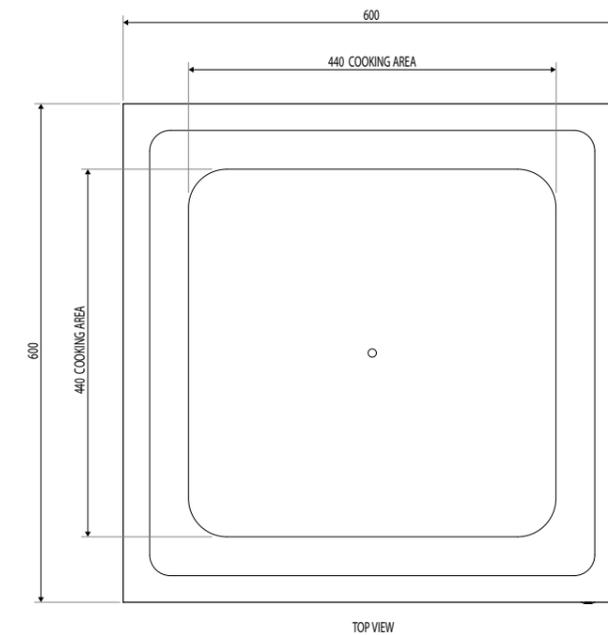

Christie cooktops are engineered explicitly for continuous use and can run thousands of cooking cycles per year. Even with such high usage, they are proven to last for many years. We also offer a two-year electronic appliance warranty and support you with a dedicated, in-house spare parts and service department for complete peace of mind.

Exceptionally responsive cooking

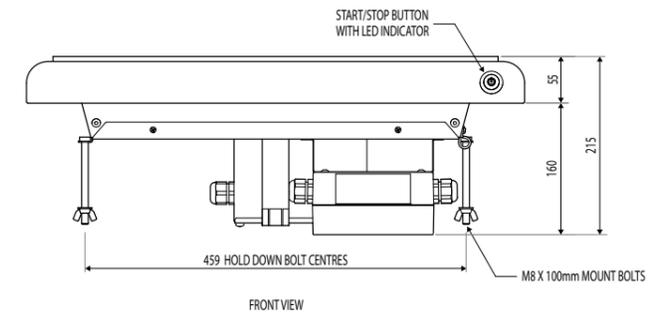

Ordinary 10 Amp domestic electric appliances cannot match the performance of traditional gas cooking. Only our 15 Amp cooktop delivers more usable heat for the same amount of electricity as low powered alternatives, while cooking large quantities of food quickly, evenly, and hygienically.

Product options

The award-winning Christie CC2 gas cooktop takes our leadership in gas cooking technology to a new level.

High performance

The CC2 gas cooktop has been tested and certified to Commercial Catering Appliance Standards and approved for both indoor and outdoor public use. They feature:

- electronic ignition and temperature sensing for ultimate reliability
- proprietary stainless-steel gas burner for even heat distribution
- electronic flame sensor with automatic re-ignition for total peace of mind

Ideal for remote locations

Our gas grills provide an ideal solution for parks and remote areas where electricity is not available. They are suitable for both reticulated (mains) gas or LPG (bottled) gas applications.

Engineered for high use

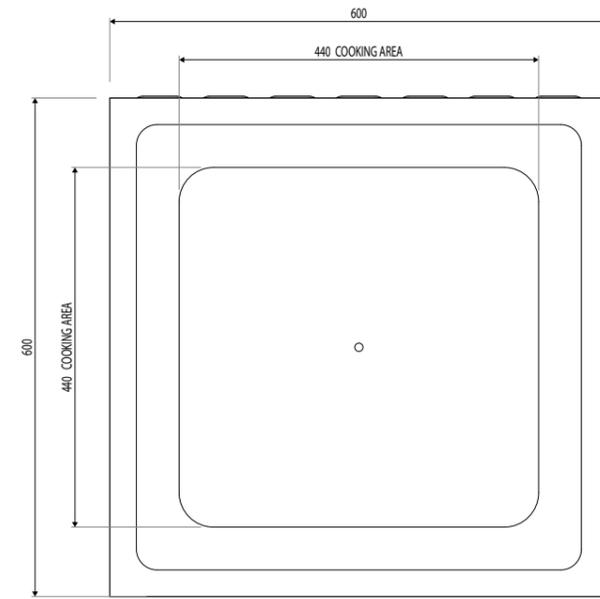

Christie cooktops are engineered explicitly for continuous use and can run thousands of cooking cycles per year. Even with such high usage, they are proven to last for many years. We also offer a two-year electronic appliance warranty and support you with a dedicated, in-house spare parts and service department for complete peace of mind.

Maintenance alerts

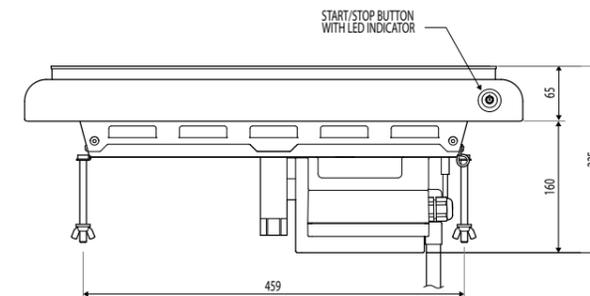

A digital controller monitors all barbecue functions to ensure that it always reaches safe and hygienic cooking temperatures. This smart self-diagnostic feature allows it to generate error notifications that allow for quick diagnosis and fast repairs.

Product options

Web and mobile app dashboards provide data insights including cleaning frequency, usage, temperature, alerts, and maintenance statistics.

Your Smart City barbecue

Connecting our popular CC2 electric cooktop to the internet of things provides real time insight into your assets. It captures detailed usage, performance, and maintenance data, and delivers it to you for convenient analysis.

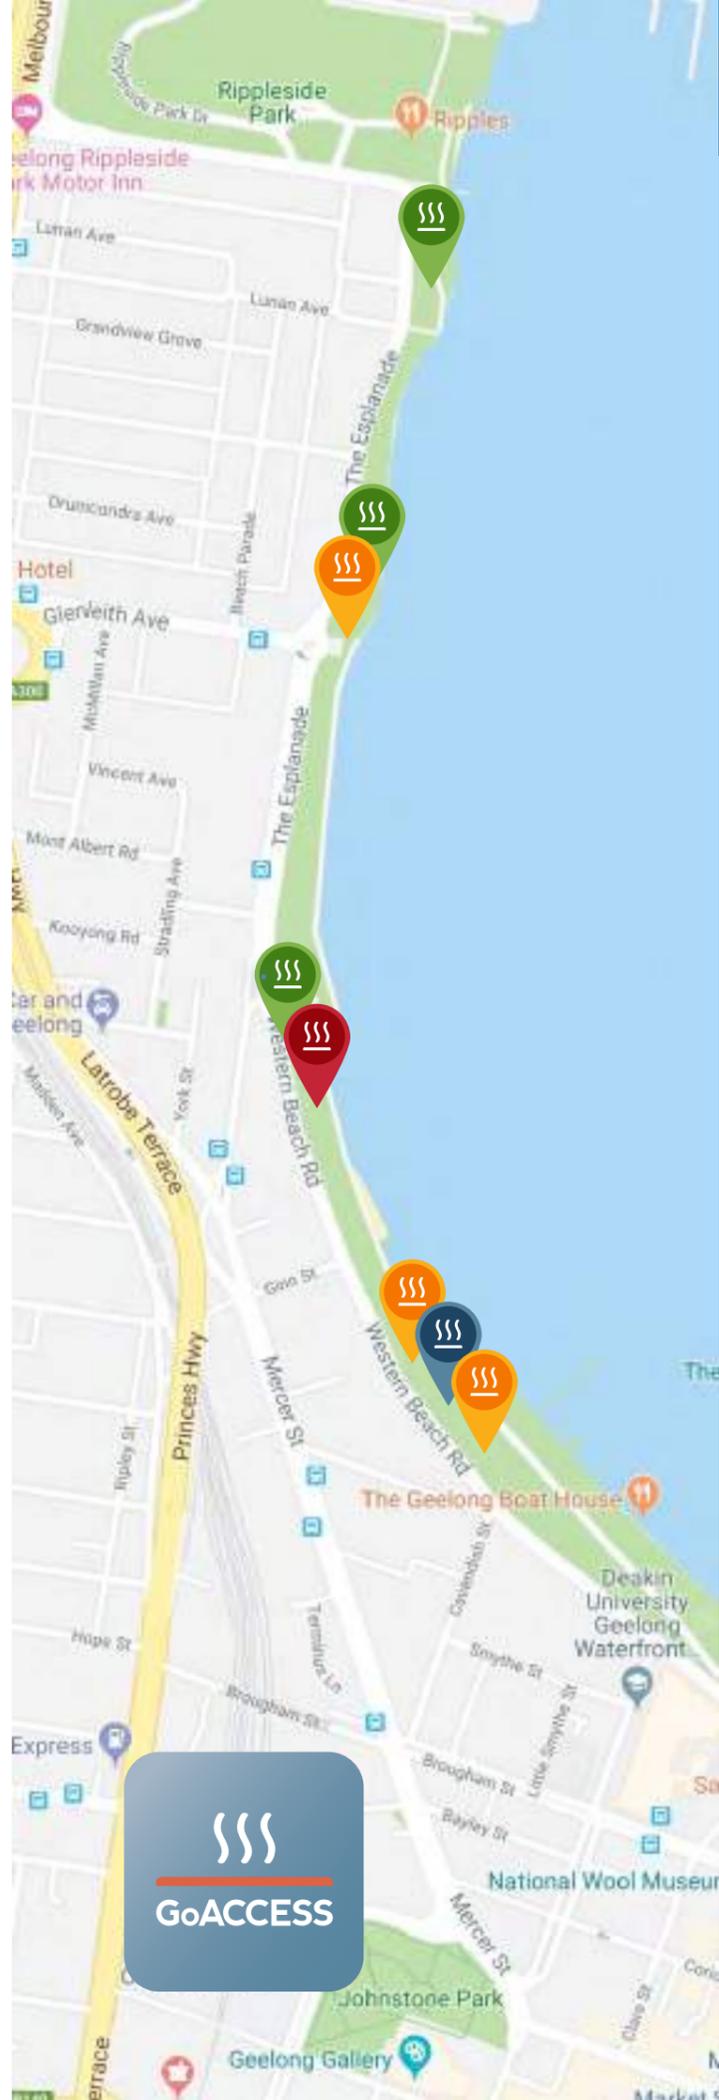

Insights delivered to you

Our CC2-i cooktop provides valuable asset maintenance information that reduces operating costs for our clients and guarantees the barbecues are always functioning as intended. Using the latest proven sensor technology to communicate usage statistics, cleaning and servicing requirements via NB-IoT, Cat-M1 or LoRa networks.

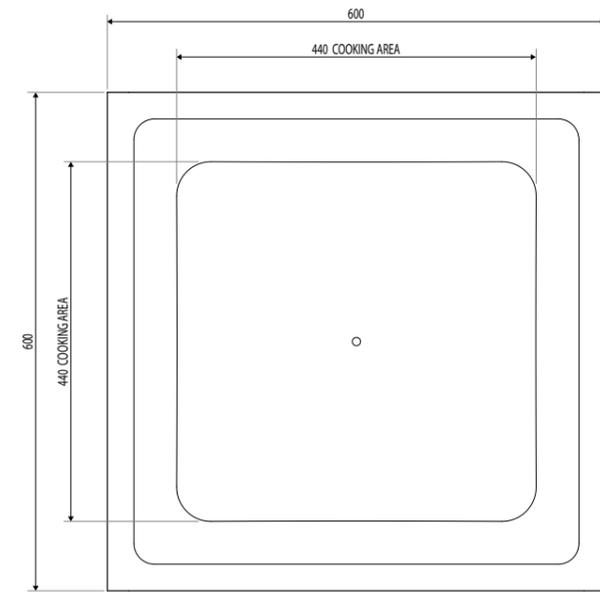

Christie sensors can also be retrofitted to most CC2 Cooktops, allowing you to monitor your entire barbecue fleet via one convenient platform.

Remote error notifications

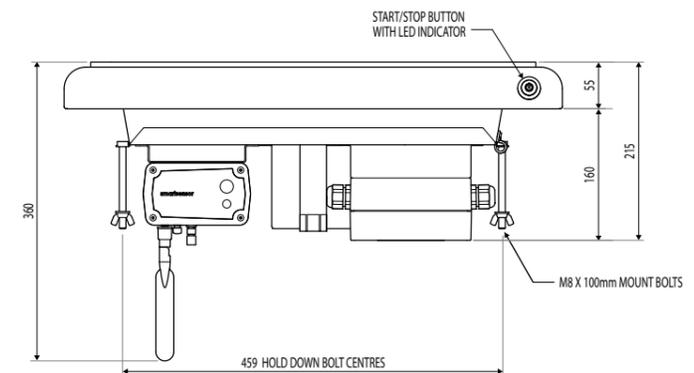

A state-of-the-art digital controller monitors all barbecue operating functions to ensure that it always reaches safe and hygienic cooking temperatures. These smart self-diagnostics can be communicated directly to you via email or SMS for quick diagnosis and fast repairs in the event of a malfunction.

Waste Containers

Hoods

The Christie Barbecue Hood is much more than a lid, with enhanced benefits beyond protecting the grill plate from dirt and debris.

Sturdy and durable, it is specifically designed to complement the functionality and performance of the Christie CC2 cooktop:

- The curved design combined with the recessed grill plate provides ample clearance to cook with the hood closed
- The sleek stainless-steel outer surface is easy to clean
- The inner aluminium panel reflects heat to the grill plate during the cooking process, significantly increasing cooking efficiency while ensuring the outer surface remains safe to touch at all times

Features and benefits

Soft close hinges and rubber bumpers for quiet operation and reduced wear and tear

Prevents water from entering the drip tray when cooktop is not in use. This reduces cleaning and maintenance costs

Stainless steel, aluminium, and nylon construction for ultimate durability and corrosion resistance

Tough, durable Glass Reinforced Nylon handle remains cool to the touch at all times

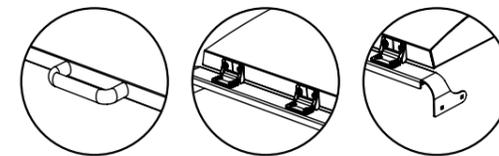

Heat reflective inner aluminium panel improves cooking efficiency by up to 25%

Dual skin insulation prevents outer panel from reaching harmful temperatures

95mm - 55mm clearance allows you to cook with the hood down, trapping heat and flavour

Corrosion resistant aluminium alloy hinges, tested to over 20,000 cycles

Constant torque hinges hold the hood open at every position above 45 degrees

Please visit our website www.dachristie.com for detailed product specifications.

Trapping radiant heat not only improves the overall cooking experience, it also keeps the outer surface of the hood from reaching harmful temperatures – in fact you can safely touch the hood during any stage of the barbecue cooking cycle.

Our pre-fabricated cabinets save you time and money

BARBECUE CABINETS

Christie flat-packed cabinets offer a fast, simple, and cost effective alternative to building your own barbecue cabinet or surround.

Robust construction

Our cabinets are famously sturdy and versatile enough for most applications and environments. From the tropics to coastal and alpine regions, they have been proven to last for many years in remote locations and extreme conditions.

Built to relevant standards

All our cabinets are designed to meet relevant standards for usability and access. We select materials for long-term durability and ease of cleaning and maintenance.

Flat packed for easy site access

Delivered flat-packed to save on freight costs and facilitate site access, our cabinets are supplied with all necessary fixings. They are quick and easy to assemble in any location. Once assembled, they are sturdy enough to last for many years in most environments.

The ICON is a modern interpretation of our industry-defining Modular cabinet. It provides universal access and an uncompromising focus on safety, durability, and ease of use and maintenance. The all-stainless construction is available in a range of standard and custom colours, to suit most project and environments.

The Good Design Awards jury described ICON as “Thoughtfully designed, considering the experience of users of all abilities, and an impressive example of design and engineering.”

Expansive Benchtop

Our research shows that communal barbecues are mainly used by groups. That’s why the ICON’s distinctive sharknose benchtop offers exceptionally generous, individual food preparation spaces. Our barbecue cooktops have no buttons in the door or benchtop. You can orientate them in opposing directions, allowing users to maintain an appropriate distance while sharing the facility.

Sustainable

Stainless steel is a long-lasting and 100% recyclable material. The ICON’s flatpack design, 60% recycled all-stainless-steel construction, and use of a single recyclable material allows the cabinet to be easily disassembled and transported to a recycling facility at the end of its long design life.

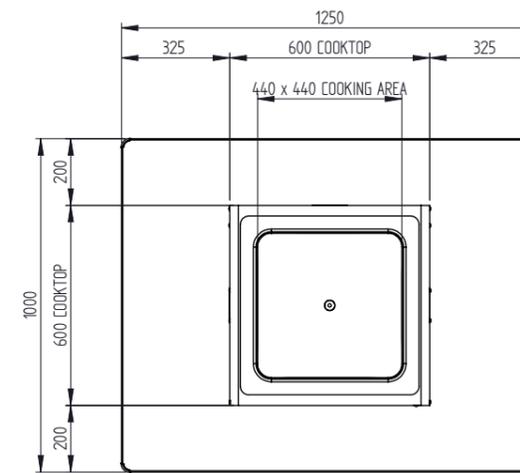

Simple to clean and maintain

ICON is durable, corrosion-resistant, and easy to clean. The split doors allow you to handle the waste tray at knee height, rather than lift it off the floor. A grease trap overflow system exits the cabinet to avoid waste build-up. You can replace any part of the ICON on site. Quick-release doors are easily removed for service, cleaning, or changing the opening swing direction. All panels and even the doors are interchangeable and available as spare parts.

Sinks

After winning prestigious Good Design awards in Australia and the USA, our celebrated A Series all-access barbecue is now part of the Permanent Design Collection of The Chicago Athenaeum: Museum of Architecture and Design.

The sculptural form of the A Series cabinet is a contemporary vehicle for our proven efficient, reliable cooking technology and offers a number of unique benefits.

Disability Discrimination Act Certified

The entire barbecue structure is DDA compliant and provides universal access to seated users of all abilities. The lowered cabinet height and extended preparation area around the cooktop prevents children from reaching hot surfaces, and allows wheelchair and other seated users to reach the grill plate with ease.

Suitable for all locations

Our A Series cabinet is shipped flat-packed to reduce transportation costs and provide easy site access. They are ready to assemble, with step-by-step assembly instructions that reduce installation costs.

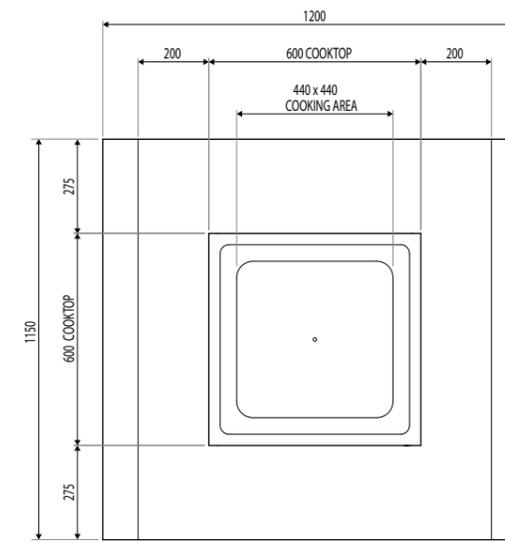

Easy to maintain

The all-stainless construction of the A Series barbecue cabinet aims for complete corrosion resistance and ease of maintenance. Once assembled, the seamless finish shows no visible fixings, while the robust engineering aims for ultimate durability and vandal resistance.

Our barbecue cooktops are self-contained outdoor cooking appliances. Use them to build your outdoor kitchen or unique barbecue surround, using the materials of your choice.

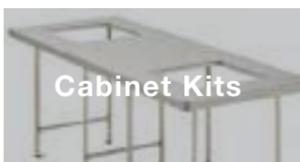

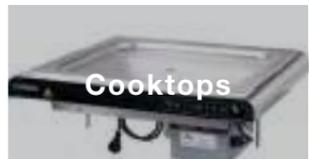

Drop-in convenience

The drop-in design of our cooktops gives you the freedom to design and build a structure to your specific requirements for parks, resorts, workplaces, rooftop gardens, and other recreational and communal outdoor spaces.

Design your outdoor kitchen

Because our cooktops have no external wiring to a door or bench, you have the freedom to use them anywhere. You can also use any of our stainless-steel benchtops, access doors, or accessories to create your unique barbecue surround.

TESTIMONIALS

What our customers and industry are saying about partnering with Christie

As a global leader in many and diverse portfolios, the AECOM Group sources products and services of only the highest standards. AECOM Specifies the Christie barbecue range internationally, as we only seek quality partners of impeccable reputation to reflect the services we provide.

Matthew Rigney - Conceptual Architect - AECOM

We just used your outdoor park barbecue for the first time in our local park. What a great piece of simple, safe engineering. Well done, it is an excellent way to appreciate our fantastic Aussie lifestyle. The food was good. My wife and I enjoyed the food and I enjoyed the easy to clean design. Well done.

Ian - resident and barbecue user

There are hundreds of parks across Brisbane and the majority of these contain Christie BBQs. The excellent products, service, and ongoing customer support we receive from Christie assist us in delivering on this promise and enhancing the outdoor amenities that Brisbane has to offer.

Brisbane City Council

We specialise in quality holiday cabins and homes along Australia's East Coast and we look no further than Christie's when we require barbecues. They are the best quality - reliable and durable. The staff are brilliant and responsive and their service is second to none.

Troy Gabriel - Director. East Coast Homes & Cabins

CHRISTIE

WARRANTY & PRODUCT SUPPORT

Properly maintained, a Christie barbecue will provide many years of reliable, efficient operation to create memorable experiences.

Peace of mind

Our grills are designed to be used for more than 12 hours each day, sometimes running more than 7,000 cooking cycles per year. Even with such extraordinary high usage, we offer a standard 2-year warranty on our products.

Real support

We provide a minimum 10-year support guarantee and have dedicated spare parts and service department to back it up. We ship parts within 24 hours. You can contact us at any time, and by quoting the serial number of your Christie barbecue, we will provide you with real-time support.
